Abstract of JP 2000131237 (A)

PROBLEM TO BE SOLVED: To reduce a cost, and to enhance a reading processing speed, in a reader for a microarray chip. **SOLUTION:** Step motors 21, 22 move a stage 30 to scan with excited light L only a prescribed position on a microarray chip arranged with combining materials (materials to be detected) 12, while a beam diameter of the excited light L for irradiating the microarray chip 10 is made by a condenser lens 60 to have on the chip 10 a diameter larger than the respective combining materials 12.
